

## Pilot Operated Relief Valves

These valves protect the hydraulic system from excessive pressure, and can be used to maintain constant pressure in a hydraulic system.

Remote control and unloading are permitted by vent circuit.

Use high venting pressure type to reduce the response time from unload to onload.

## Attachment

### Mounting Bolts

Valve Model Number	Socket Head Cap Screw	Qty Nos.	Bolt Kit Ordering Code
BG-03	M12 x 70Lg., M12 x 95Lg.	2 each	BK BG-03-10
BG-06	M16 x 60Lg., M16 x 80Lg.	2 each	BK BG-06-10
BG-10	M20 x 70Lg., M20 x 90Lg.	2 each	BK BG-10-10

### Sub-Plate

Valve Model Number	Sub-plate Model Number	Piping Size	Mass Kg.
BG-03	BGM-03-3080	3/8 BSP.F	2.4
	BGM-03X-3080	1/2 BSP.F	3.1
BG-06	BGM-06-3080	3/4 BSP.F	4.7
	BGM-06X-3080	1 BSP.F	5.7
BG-10	BGM-10-3080	1-1/4 BSP.F	8.4
	BGM-10X-3080	1-1/2 BSP.F	10.3

- Sub-plates are available. Specify sub-plate model from the table above. When sub-plates are not used, the mounting surface should have a good machined finish.

## Instructions

- If a remote control relief valve is used in the vent circuit, see page 1 in EIC-C-1001-0. In addition, if the internal volume of the vent line is too large, chattering is likely to occur. Thus, as far as possible reduce the inside Dia. and the length of the pipe.
- To adjust the pressure, loosen the lock nut and turn the handle slowly clockwise for higher pressure or anti-clockwise for lower pressures. One revolution of the handle makes about a 50 Kgf/cm<sup>2</sup> pressure change. After adjustments, do not forget to tighten the lock nut.
- Pressure is limited by collars fitted. If a working pressure cannot be attained, remove some collars. One collar is equivalent to 100 Kgf/cm<sup>2</sup>.
- Piping of the Tank line should not be connected to any tank line of the other valves, but connected directly to the tank.
- With a small flow, the setting pressure may be unstable. Use models numbered 03 and 06 with a flow rate 8 L/min. and model 10 with 15 L/min.
- There are two threaded connection pressure ports. They can be connected each other in-line one as inlet and the other as an outlet or the valve can be used by plugging one of the pressure ports.

## Solenoid Controlled Relief valves

These valves are a combination of relief valve and solenoid valve. Piping between the two is eliminated as the solenoid valves is directly mounted on the relief valve and connected with the relief valve vent. Pump pressure may be unloaded remotely by an electrical signal to the solenoid, or by connecting pilot relief valves to the solenoid valve ports.

## Specifications

Model Number		Max. Operating Pressure Kg/cm <sup>2</sup>	Pres. Adj. Range Kg/cm <sup>2</sup>	Max. Flow L/min.	Mass (Kg)

- Sub-plates are available. Specify sub-plate model from the table above. When sub-plates are not used, the mounting surface should have a good machined finish.
- The sub-plates are those for pilot operated relief valves. For dimensions, refer page 4.

## Option

### With vent restrictor

The type with a vent restrictor valve, in vent types 2B3A and 2B3B added between relief valve and a solenoid operated directional valve. It prevents shock to the main circuit by gradually lowering the venting pressure in the shift from set pressure to unloading.

Unloading pressures are the same as without a vent restrictor.

A-BS※-※-2B3A

A-BS※-※-2B3B

## Instructions

- The remote control relief valve is used in the vent circuit, see page 1 in EIC-C-1001. In addition, if the internal volume of the vent line is too large, chattering is likely to occur. Thus, as far as possible reduce the inside diameter and the length of the pipe.
- To adjust the pressure, loosen the lock nut and turn the handle slowly clockwise for higher pressure or anti-clockwise for lower pressures. One revolution of the handle makes about a 50 Kg/cm<sup>2</sup> pressure change. After adjustments, do not forget to tighten the lock nut.
- Pressure is limited by collars fitted. If a working pressure cannot be attained, remove some collars. one collar is equivalent to 100 Kg/cm<sup>2</sup>.
- Piping of the tank line should not be connected to any tank line of the other valves, but connected directly to the tank.
- With a small flow, the setting pressure may be unstable. Use models numbered 03 and 06 with a flow rate above 8 L/min. and model 10 with 15 L/min.
- There are two threaded connection pressure ports in BST type. They can be connected each other in-line; one as inlet and the other as an outlet or the valve can be used by plugging one of the pressure ports.
